

Nonwovens Technology Innovative Application Conference 2017

21-22,
September
MILLENNIUM
XIAMEN

CONFERENCE BACKGROUND:

A non-woven fabric in the textile industry as the industry's fastest growing, has been widely applied to various industries, Chinese non-woven industry has to gentrification, many companies and products with strong competitiveness in the world. Through many years of exploration and development, China's textile enterprises have gone out of their own characteristics of the road.

Nonwoven materials applications such as hygiene, filtration, medical and healthcare will continue to grow rapidly in the coming years. This is due to the fact that China and India, together account for over a third of the world's population, and have shown an ever increasing demand for nonwoven products. However whilst the market maybe growing in size , competition is also increasing.

In fact, China is already the biggest consumer of disposable hygiene products in the world. Products such as baby and adult diapers, feminine hygiene and pet diapers yet the market penetration in China is still low, with only 35% of consumers using such products in China. The implication of course is that there is a huge potential market. Another sector enjoying great growth is the filtration market. From microscopic fibers to nanotechnology, promoting the development of filter market, expanding the application range of non-woven fabric market.

The 2017 Nonwovens Technology Innovative Application Conference will give you insights on innovative R&D, market analysis, government policies and regulations plus case studies on "best practices". It's another conference you cannot miss out!
