

Plastics & Rubber Innovative Materials Processing and Technology Application in Packaging Conference 2017

Mar.9-10

The Longemont Shanghai Hotel

Post-Event Report

According to the "12th Five-Year Plan" of the plastic packaging industry, the average growth rate of plastic products output by enterprises above designated size will exceed 12% and the average growth rate of industrial output value will exceed 15%. Overall, China has become the main power of the global packaging industry, but in terms of variety, quality, new product R & D capabilities and economic benefits, there is still a big gap between the developed countries. High-end packaging materials and technology (such as machinery, plastic film, etc.) is still monopolized by Europe Japan and other developed countries.

Workshops every year, in addition to innovation in terms of content, in the form of a meeting or said meetings to bring real value, we are in the exploration of innovation. Seminar is not only a chance of a 'learning and social, is also a great opportunity to establish business cooperation. Therefore in this year's Symposium, we particularly new supply and demand matching serviceto in the specified time in matching supply and demand of indoor negotiate specified clients and sponsors. Next year, look forward to meeting with you at the next session of the technical summit!
